

## **iPure Simplifies Pure Water Production**

**iPure unit with PVC piping.**

### **Is your water treatment system performing the way it should?**

We will evaluate your system using our proprietary Pure Water System Assessment to show you how you can

- Take advantage of new cost and labor savings
- Utilize updated technologies
- Maintain optimum system operation

**Call today for a NO-COST system assessment. 973.622.0440**

As innovators in water treatment systems, we've pre-engineered an easy-to-operate, cost effective unit that produces high purity water consistently and without the maintenance and downtime of other systems.

### **Why Choose an iPure System?**

#### **Patented, modular construction**

- Integrates state-of-the-art membrane and ion exchange technologies
- Compact system can be sized to produce from 300 to 18,000 gallons per day of high purity water
- Design allows for multiple system configurations and easy system expansion
- Standardized unit design means faster delivery, quick startup and faster validation

#### **Easily meets high purity specs**

- Standard unit consistently produces 99-99.99% reduction in dissolved inorganics; 95-99% reductions in organics greater than 150 NMW; and 99% reduction in suspended particles, colloids, micro-organisms and pyrogens
- Produces water to USP, WFI, ASTM, and CAP specs with additional pre-engineered modules

#### **Lightning fast installation and startup**

- Arrives at your site skid-mounted, fully tested, and ready for installation
- Requires only five service utility connections
- Installs in less than half the time it takes to assemble and test competitive systems
- Starts producing on-spec water in minutes – competitive systems can take days or weeks to start up
- Can also be monitored and controlled remotely

#### **97+% Up-time**

- Simple, user-friendly operation – operators don't need to be water treatment experts to produce on-spec product
- Reliable for continuous or intermittent production
- Minimal system maintenance

#### **Lower total cost of ownership**

- No costly service exchange units or regeneration chemicals.
- Operating expenses are 10% to 600% lower than traditional systems
- Installation and startup costs are significantly lower

#### **The iPure Performance Guarantee**

*We guarantee that your iPure system will produce high purity water to your exacting specifications before it leaves our factory.*

# iPure Product Comparison

**iPure unit with optional Allen Bradley™ control package**

**iPure-C unit with optional EDI module**

## Need water distribution too?

Keeping high purity water contaminant-free while distributing it to multiple end users can be challenging. The iPure unit integrates easily with the iPolisher system, which is designed to store and distribute high purity water easily and efficiently.

We can provide these units in a turnkey solution for the most demanding of applications.

| Product Features                                                              | iPure | iPure-C |
|-------------------------------------------------------------------------------|-------|---------|
| Modular design for easy expansion                                             |       |         |
| Epoxy-coated steel frame for floor mounting                                   |       |         |
| Stainless steel supply pump                                                   |       |         |
| Fiberglass RO membrane housings                                               |       |         |
| High rejection TFC membranes                                                  |       |         |
| Stainless steel high pressure gauge                                           |       |         |
| Comprehensive system documentation                                            |       |         |
| PVC permeate manifold system                                                  |       |         |
| Polypropylene, Stainless Steel or PVDF permeate manifold system               |       | N/A     |
| Particulate filtration module                                                 |       |         |
| Water softening module                                                        |       |         |
| Dechlorination module                                                         |       |         |
| Low inlet pressure interlock                                                  |       |         |
| High outlet pressure interlock                                                |       |         |
| Automatic system shutoff                                                      |       |         |
| Temperature compensated resistivity monitor with alarm on low product quality |       |         |
| Panel mounted product & waste flow meters                                     |       |         |
| Automatic pre-start & post-shutdown system flush                              |       |         |
| Allen Bradley™ control system                                                 |       |         |
| Booster pump for low inlet pressure                                           |       |         |
| UV sterilization module                                                       |       |         |
| TOC reduction module                                                          |       |         |
| Electrodeionization unit with regulated power supply                          |       |         |
| IQ & OQ validation packages                                                   |       |         |
| UL & CE labels                                                                |       |         |
